PROFESSIONAL SUMMARY

Backend-focused .NET Developer with hands-on experience designing and building RESTful APIs, modular monoliths, and microservices using .NET 7-10 and ASP.NET Core. Skilled in Clean Architecture, SOLID principles, and CQRS with MediatR. Proficient in synchronous server-to-server communication via gRPC and event-driven architectures using MassTransit, RabbitMQ, and Azure Service Bus. Experienced with Azure cloud services, Docker containerization, CI/CD pipelines, and comprehensive testing strategies using xUnit, Moq, and TestContainers.

TECHNICAL SKILLS

Languages: C#

Frameworks: .NET 7-10, ASP.NET Core, Entity Framework Core

Architecture & Patterns: Clean Architecture, CQRS, MediatR, Microservices, Modular monolith, Outbox, Inbox

API & Communication: REST API, gRPC

Messaging: MassTransit, RabbitMQ, Azure Service Bus

Databases & Caching: MS SQL Server, Redis

AI: GitHub Copilot

Cloud & DevOps: Microsoft Azure, Docker, .NET Aspire, Git

Testing: xUnit, Moq, TestContainers

PROJECTS

Order-services — Order microservice project demo

<https://github.com/KostiantynMyroniuk/order-services>

Tech stack: .NET 10, ASP.NET Core, Mssql, Redis, RabbitMQ, Grpc, Docker, CI/CD, Jwt Auth

- Built a containerized order processing microservice using ASP.NET Core and .NET 10, utilizing Docker and CI/CD pipelines for streamlined automated deployment.
- Architected the system utilizing Domain-Driven Design principles and the CQRS pattern to strictly separate command and query responsibilities, improving code maintainability and scalability.
- Implemented high-performance basket caching and idempotent request handling using Redis.
- Configured RabbitMQ for asynchronous event-driven communication between services and established high-performance synchronous integrations using gRPC.
- Secured API endpoints with JWT Authentication and implemented idempotent request handling to prevent duplicate order processing.

ProjectMS — Microservices Project Management System

github.com/KostiantynMyroniuk/ProjectMS

Tech stack: .NET 10, ASP.NET Core, .NET Aspire, Minimal API, EF Core, MS SQL Server, RabbitMQ, MassTransit, JWT, Azure Blob Storage, xUnit, Moq

- Designed and built a multi-service backend orchestrated with .NET Aspire, following the Database-per-Service pattern.
- Implemented JWT-based authentication with ASP.NET Core Identity and a token-based project invitation flow with expiration and duplicate-invite protection.
- Developed an event-driven email notification worker using MassTransit and RabbitMQ, and integrated Azure Blob Storage for task file uploads.
- Wrote unit tests with xUnit and Moq to validate core business logic.

EDUCATION

Vinnytsia National Technical University

September 2022 – July 2026

Bachelor of Science in Software Engineering

University courses: .NET - Basics, architecture and algorithms.

LANGUAGES

Ukrainian: Native **English:** Intermediate (B1)
